

Iberdrola Australia scholarships keep students in regions

Iberdrola Australia has partnered with Country Universities Centre – Isaac (CUC) to fund five scholarships each year for three years to support students living in the Isaac region to further their education.

CUCs have been established in communities across regional Australia with the goal of providing equitable access to higher education.

The partnership will deliver \$75,000 of scholarships into the Isaac region, supported by virtual reality and IT equipment, and sponsorship of meeting facilities through \$15,000 in additional funding.

Paul Simshauser, Chief Executive Officer, Iberdrola Australia said regional students in particular face more challenges in accessing higher education due to the tyranny of distance and connectivity issues. Our partnership with CUC will allow more students access to further their education and stay in their home towns.

“We believe being a good neighbour means looking after the community in which we operate and helping it grow,” Mr Simshauser said.

“This partnership will deliver five \$5000 scholarships annually over three years and make it easier for regional students to access a good quality education with the latest technology.”

“We recently announced \$750,000 jointly with our colleagues at CS Energy and Squadron Energy to upgrade the Telstra tower at Broadsound – this will deliver better connectivity for students, businesses, and the whole Clarke Creek community.”

CUC allows regional students to study locally by providing a free, quiet, and safe study space for students completing nationally recognised qualifications.

Applications are now open – if you’re a current or prospective CUC Isaac student, or a school leaver considering higher education, visit this website to find out more: [CUC Isaac Iberdrola Australia Scholarship Program | CUC Isaac](#)

About Iberdrola Australia

Iberdrola Australia has a twenty-year history of pioneering the renewable energy transition in Australia. Our strategy is to combine our large and growing fleet of wind and solar renewable energy generation with a portfolio of fast-start firming assets, enabling us to provide customers with electricity supplies that are at once reliable, affordable and green. With over 2.5GW of capacity in operation or construction providing renewable energy to approximately 400 commercial and industrial customers, we are one of the largest, fastest growing and most diversified renewable utilities in the country.
